ENGINE PERFORMANCE CURVE

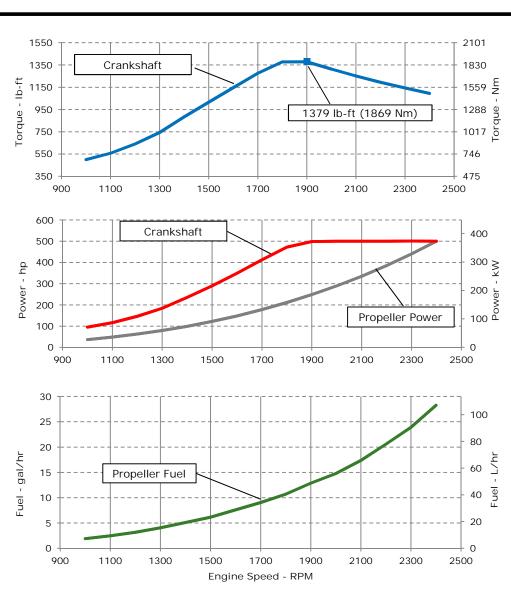

Rating: M4 - 500hp (373kW) @ 2400 RPM

Application: Marine

PowerTech[™] 9.0L Engine

Model: 6090SFM85

REFERENCE CONDITIONS

 Air Intake Restriction
 12 in.H₂O (3 kPa)

 Exhaust Back Pressure
 30 in.H₂O (7.5 kPa)

Rated speed and power

Gross power guaranteed within $\pm 5\%$ at SAE J1995 and ISO 3046 J1995 and ISO 3046 conditions:

77 °F (25 °C) air inlet temperature 29.31 in.Hg (99 kPa) barometric pressure 104 °F (40 °C) fuel inlet temperature

104 °F (40 °C) fuel inlet temperature 0.853 fuel specific gravity @ 60 °F (15.5 °C)

Ambient air temperature is defined to be the temperature of ambient air close to operating vessel that is not influenced in any manner by operating characteristics of the vessel (free field temp).

Conversion factors:

Power: $kW = hp \times 0.746$

Fuel: 1 gal = 7.1 lb, 1 L = 0.85 kg

Torque: $N \cdot m = \text{Ib-ft x } 1.356$

All values from currently available data. Subject to manufacturing and measurement variations and to change without notice.

Actual performance is subject to application and operation conditions outside of John Deere control.

Notes:

M4: The M4 rating is for marine propulsion applications that typically operate between 1,000-3,000 hours per year and have load factors below 40 percent. This rating is for applications that use full power no more than 1 hour out of each 12 hours of operation. The remaining time of operation is at or below cruising speed.

Possible applications: Inshore crew boats, charter fishing boats, pilot boats, dive boats, and planning hull commercial fishing boats.

Designed/Calibrated to meet: Certified by:

- EPA Commercial Marine Tier 3
- IMO MARPOL Annex VI Compliant
- NRMM (97/68/EC), as amended

Ref: Engine Emission Label
